

Setting of Group Bari:

A small furniture company has increasing problems to sell their products. The management analyses the situation. The main results are:

- The time from the customer's order to deliver the final product is too long
- The company is not able to follow new market requirements fast enough
- The company has problems with the quality of the products

The management develops the following idea to solve the problems:

The whole production should be transformed to a mostly full automatically production process according to the supply chain of the so called "Industry 4.0"

According to the actual employees as well as for new employees of the company this will have the following consequences

- The vocational education of the new employees must include all the competences that will be needed for the "new working world"
- The company's employees must receive appropriate training.

Ideas for Learning Modules:

1: What is necessary to implement a “modern way of production according to 4.0 in a small furniture company?

Starting point: an app that presents several opportunities / elements of create an individual chair

2: The customer reports quality issues

3: You as a producer must follow the market requirements

4: Delivery problems,

5: lack of work force

6: the price of the product is not competitive

Basic question:

E.g.: Why does a carpenter have to know anything about logistics??
