

Mapping – Electronics Technician (Germany)

Translated title of the training programme	journeyman's examination in the state-recognized training occupation Electronics technician – specialising in energy and building technology				
Brief explanation of the professional fields of ac-	Analyse and remedy errors and maintain devices and systems				
tivity (appr. 5 sentences)	Assemble and install components, sub-assemblies, devices and networks				
	Design energy and building technology systems				
	Set up and commission devices and building systems				
	Install and check aerial and broadband communication equipment				
	Carry out repeat checks and maintain technical building systems				
	Check and assess protective measures for electrical plants and equipment				
Certificate (incl. EQF-level)	ISCED 354				
	This qualification corresponds to Level 4 of the German and European Qualifications Framework; cf. publication from 1 August 2013 (BAnz AT 20/11/2013 B2)				
Entry requirements	Entry requirements are not governed by legislation; as a rule, young people are admitted after completing (nine or ten years of) general education.				
Access to next level of education / VET-training	Master craftsman qualification in electrical engineering, state certified technician in the relevant specialisms, specialist clerk for commercial management.				

VQTS-Matrix Building Service Engineering, Electronics Technician (Germany), May 2024

Notes on using the matrix (Glossary)

The competence matrix for the field of Building Service Engineering is the result of a pan-European empirical study of operational practice. From this, a total of 10 core work processes were identified on the vertical axis and the competences required for these were described as units of learning outcomes. The entire matrix relates to EQF levels 3 - 6. The level of requirement of the matrix increases horizontally and, with regard to core work processes 1 to 7, also vertically. Core work processes 1 to 7 relate to classic core competences in Building Service Engineering. Core work processes 8 to 10, on the other hand, are to be understood more as cross-activity areas of expertise that are particularly important for adaptation processes in the context of interdisciplinary cooperation. The units in the matrix are formulated in general terms and can therefore be related to different occupational fields that have cross-sectional competences in Building Service Engineering.

The definitions and explanations below will help you to identify the competencies of the various occupational fields

Building systems tech- nology	Building systems technology encompasses all the technology required to operate a building. This includes construction technology, sanitation, heating and air conditioning, electrical engineering, information technology and security technology.
Building systems	Building systems include all technical components of a building for the supply of heat, air, light, water, energy and information, the disposal of wastewater and exhaust air as well as all associated processes. The term building system must be replaced accordingly for an individual building systems technology trade (e.g. electrical engineering or sanitation, heating, and air conditioning). e.g.: Electrical engineering: the entire power supply of a building. Heating technology: the entire heating system of a building.
Components of building systems	Components of building systems include single technically relevant elements of a building. e.g.: Electrical engineering: PV modules as a component of the entire electrical energy supply. Heating technology: A heat pump as a component of a building's entire heating system.
Building system pro- cesses	In terms of facility management, building system processes include all technical and service-related processes regarding planning, construction, operation and dismantling of a building. (e.g. switch-on times of lighting, ventilation, and air conditioning systems, cleaning intervals, presence times, energy flows, operating times of monitoring equipment)

1st and 2st year of further vocational education 3st and 4st year of further vocational education

	Competence areas Core working process	Steps of competence development:			
1	Assembly, disassembly and disposal of building systems and their components	He/she can assemble and disassemble components of building systems according to existing assembly and installation plans and in compliance with applicable standards, regulations, and laws. He/she can professionally separate components and building materials while the disposal of building systems.	He/she can plan and document the assembly and disassembly of components of building systems according to customer specifications and in coordination with authorities, architects, and system manufacturers, considering legal requirements. He/she can dispose of the professionally separated components and building materials of building systems in accordance with legal regulations. He/she can estimate workloads and report possible problems to superiors.	He/she can analyze and adapt assembly, dismantling and disposal concepts for building systems or their components regarding process optimization and the current legal situation. He/she can use project management tools in a targeted manner.	He/she can develop new concepts for installation, dismantling and disposal of building systems or their components in cooperation with customers, authorities, and manufacturers of building systems technology.
2	Maintain building systems or their components	He/she can operate components of building systems according to specifications and check their function.	He/she can carry out and document inspection, maintenance, and repair work on components of building systems according to the manufacturer's instructions.	He/she can carry out complex inspection, maintenance and repair work on building systems and prepare documentation.	He/she can create maintenance concepts for building systems considering manufacturer specifications and economic aspects as well as applicable regulations and standards. He/she can create deployment and work plans and determine the team's human and material resources. He/she can use project management tools in a targeted manner.
3	Commissioning of building systems or their components	building components according to specifications and customer requirements. building in according to specifications and customer requirements and test the approximations. He/she defects	technical building ure them and prepare documentation to treports in compliance with olicable standards and specifical can recognize and document and conflicting objectives dur-	nize and document cting objectives dur- g and resolve them	in com- nical building systems or the entire

	Competence areas Core working process				Steps of competence development:				
4	Monitoring, control and optimization of building system processes through building automation	He/she can operate simple building automation systems according to specifications and guidelines and further check system statuses to ensure a stable operating status.	occur in building systems, initiate processes to rectify faults according to		He/she can independently develop solution strategies in the event of faults occurring in technical building systems and initiate their implementation. He/she can analyze the conditions of complex building tems, carry out optimizate document changes.		ing sys-	He/she can develop, document, and implement concepts for optimizing the economy and ecology of building system processes by analyzing building automation data.	
5	Conception of building systems, their components and the associated processes	He/she can recognize, structure, and specify the requirements for building systems from customer orders and convert them into a user profile, considering applicable regulations, standards, and laws. He/she can create a concept for the requirements for building systems from user profiles.	components of building systems according to the concepts created from the user profiles in compliance with regulations and guidelines. He/she can profile determine cosmanagement specify service		He/she can plan building system profacility management. He/she can prepadetermine costs for management of buspecify service tast pile associated stat	re technical data, rethe operation and ildings and further ks as well as com-			He/she can prepare tender documents based on applicable legal requirements and the user profile. He/she can determine optimization potentials regarding economy and ecology for existing systems and new systems, and further create corresponding concepts and advise customers in this regard.
6	Identification, implementation, and review of legal requirements for the operation of a building system	He/she can carry out and document activities to maintain operation regarding legal requirements for a building system or its components as specified.	ments for system ther ther imp through	can identify the legal require- or the operation of a building based on regulations and fur- olement and document them organizational measures.	Iding protocols and work plans based on legal requirements.		He/she can prepare a hazard ment (risk analysis). He/she can take the risk ana account when organizing the tion of a building system as planning personnel deployments.	lysis into e opera- nd when	He/she can create and optimize a guideline for the implementation of legal requirements, draw conclusions about their effectiveness and take them into account in future planning processes.
7	Cost control and monitoring for the life cycle of a building system	He/she can determine and document b for tracking cost of building systems in ance with guidelines.	· ·		~	He/she can evaluate key figures of building systems and analyze them to identify optimization potentials.		He/she can implement the identified optimization potentials and ensure their effectiveness.	
8	Communication across trades, also in foreign languages	He/she can understand basic technical terms of his/her own and other trades. He/she can conduct conversations with superiors and employees of his/her own and other trades and customers in an appropriate manner while presenting and explaining facts. He/she can read product data sheets and carry out assembly and operating instructions of his/her own and other trades. He/she can communicate with non-specialist trades with the help of translation aids.		He/she can understand and use from his/her own and other to the He/she can conduct discussion and employees of his/her own and customers and resolve ately. He/she can obtain and evaluately operating instructions as we sheets for all trades.	coordination mentions and other trades ve conflicts appropri- He/she can und standards, laws framework of the		et and document planning and tings with "decision-makers" authorities involved. 		etence areas orking process	Steps of competence development:						
9		Human resources management He/she can identify the training needs of employees and select and organize suitable training courses for further education and training.		He/she can plan personnel requirements, define criteria for the qualification profile of specialist staff and formulate corresponding job descriptions.	He/she can conduct and document personnel development interviews with employees.				
					He/she can prepare an appraisal for employees based on criteria.				
					He/she can recognize the professional and personal development potential of employees and promote it through suitable measures.				
1	O Digital in and known manager	_	He/she can choose basic and advanced digital tools to solve professional tasks and use them in a targeted manner in his/her own profession. He/she can apply data protection regulations and legal regulations in a professional context.	He/she can choose basic and advanced digital tools to solve professional tasks and use them in a targeted, collaborative manner not only in his/her own profession. He/she can select and use suitable digital tools to create technical presentations and documentation.	He/she can design and create building operation workflows from an economic and ecological point of view while taking future requirements into account with the help of suitable tools and modern technologies.				
			He/she can carry out targeted information research to solve professional tasks and evaluate the results.	He/she can carry out targeted information research to solve professional tasks and evaluate the results and check their professional accuracy.
