

## **Notes on using the matrix (Glossar)**

The competence matrix for the field of Building Service Engineering is the result of a pan-European empirical study of operational practice. From this, a total of 10 core work processes were identified on the vertical axis and the competences required for these were described as units of learning outcomes. The entire matrix relates to EQF levels 3 - 6. The level of requirement of the matrix increases horizontally and, with regard to core work processes 1 to 7, also vertically. Core work processes 1 to 7 relate to classic core competences in Building Service Engineering. Core work processes 8 to 10, on the other hand, are to be understood more as cross-activity areas of expertise that are particularly important for adaptation processes in the context of interdisciplinary cooperation. The units in the matrix are formulated in general terms and can therefore be related to different occupational fields that have cross-sectional competences in Building Service Engineering.

## The definitions and explanations below will help you to identify the competencies of the various occupational fields

Building systems tech- nology	Building systems technology encompasses all the technology required to operate a building. This includes construction technology, sanitation, heating and air conditioning, electrical engineering, information technology and security technology.
Building systems	Building systems include all technical components of a building for the supply of heat, air, light, water, energy and information, the disposal of wastewater and exhaust air as well as all associated processes. The term building system must be replaced accordingly for an individual building systems technology trade (e.g. electrical engineering or sanitation, heating, and air conditioning).  e.g.:  Electrical engineering: the entire power supply of a building.  Heating technology: the entire heating system of a building.
Components of building systems	Components of building systems include single technically relevant elements of a building. e.g.: Electrical engineering: PV modules as a component of the entire electrical energy supply. Heating technology: A heat pump as a component of a building's entire heating system.
Building system pro- cesses	In terms of facility management, building system processes include all technical and service-related processes regarding planning, construction, operation and dismantling of a building.  (e.g. switch-on times of lighting, ventilation, and air conditioning systems, cleaning intervals, presence times, energy flows, operating times of monitoring equipment)

	Competence areas Core working process	Steps of competence development:							
1	Assembly, disassembly and disposal of building systems and their components	He/she can assemble and disassemble nents of building systems according to assembly and installation plans and in ance with applicable standards, regulationally.  He/she can professionally separate nents and building materials while the of building systems.	existing and disassembly of component tems according to customer in coordination with authority system manufacturers, corquirements.	ents of building sys- especifications and ties, architects, and nsidering legal re- professionally sepa- liding materials of the with legal regu-	He/she can analyze and adapt assembly, dismantling and disposal concepts for building systems or their components regarding process optimization and the current legal situation.  He/she can use project management tools in a targeted manner.		He/she can develop new concepts for installation, dismantling and disposal of building systems or their components in cooperation with customers, authorities, and manufacturers of building systems technology.		
2	Maintain building systems or their components	He/she can operate components of build tems according to specifications and che function.	eck their maintenance, and repair wo	He/she can carry out and document inspection, maintenance, and repair work on components of building systems according to the manufacturer's instructions.		He/she can carry out complex inspection, maintenance and repair work on building systems and prepare documentation.		He/she can create maintenance concepts for building systems considering manufacturer specifications and economic aspects as well as applicable regulations and standards.  He/she can create deployment and work plans and determine the team's human and material resources.  He/she can use project management tools in a targeted manner.	
3	Commissioning of building systems or their components	building components according to specifications and customer requirements.	He/she can commission technical building systems and configure them in accordance with customer requirements and prepare documentation and test reports in compliance with the applicable standards and specifications.  He/she can recognize and document defects and conflicting objectives during commissioning.	He/she can com technical building sure them in according to tomer requirement pare documentation in compliance with ards and specification. He/she can recogn defects and conflicting commissioning in coordination with	ystems and config- ordance with cus- ts as well as pre- on and test reports a applicable stand- ions. lize and document ting objectives dur- and resolve them	He/she can commission the enti building systems technology in cor pliance with applicable standards as specifications.		He/she can hand over complex technical building systems or the entire building system technology to the operator, including the associated documentation, instruct him/her in its use and inform him/her of the operator's responsibilities.	
4	Monitoring, control and optimization of building system processes through building automation	automation systems according to specifications and guidelines and	He/she can interpret data when faults occur in building systems, initiate processes to rectify faults according to guidelines and document this.	He/she can indep solution strategies faults occurring in systems and initial tation.	in the event of technical building	He/she can analyze the op- conditions of complex buildi tems, carry out optimizatio document changes.	ng sys-	He/she can develop, document, and implement concepts for optimizing the economy and ecology of building system processes by analyzing building automation data.

5	Conception of building systems, their components and the associated processes	He/she can recognize, structure, and specify the requirements for building systems from customer orders and convert them into a user profile, considering applicable regulations, standards, and laws. He/she can create a concept for the requirements for building systems from user profiles.  He/she can dimension and select components of building systems according to the concepts created from the user profiles in compliance with regulations and guidelines.		building system processes in terms of facility management.  data erty data		He/she can determine all relevant data for the documentation of property operation and prepare given data for the management of buildings.		f prop- given	He/she can prepare tender documents based on applicable legal requirements and the user profile.  He/she can determine optimization potentials regarding economy and ecology for existing systems and new systems, and further create corresponding concepts and advise customers in this regard.
6	Identification, implementation, and review of legal requirements for the operation of a building system	ment activities to maintain operation regarding legal requirements for a building system or its components as specified.  for the operation based on regulation ment and docume zational measures.	y the legal requirements of a building system ons and further implent them through organicut a safety briefing.	He/she can independently create test protocols and work plans based on legal requirements.		ment (risk a He/she can account wh tion of a be	te can prepare a hazard assess- (risk analysis).  The can take the risk analysis into ont when organizing the operator a building system and when ing personnel deployment.		He/she can create and optimize a guide- line for the implementation of legal re- quirements, draw conclusions about their effectiveness and take them into account in future planning processes.
7	Cost control and monitoring for the life cycle of a building system	tracking cost of building systems in accordance with and create k		basic data for cost tracking from it.  He/she can evaluate ke ing systems and analyze optimization potentials.		ınd analyze t	ze them to identify tion pot		can implement the identified optimiza- entials and ensure their effectiveness.
8	Communication across trades, also in foreign languages	He/she can understand basic technical terms of his/her own and other trades.  He/she can conduct conversations with superiors and employees of his/her own and other trades and customers in an appropriate manner while presenting and explaining facts.  He/she can read product data sheets and carry out assembly and operating instructions of his/her own and other trades.  He/she can communicate with non-specialist trades with the help of translation aids.	from his/her own and of the she can conduct do and employees of his/hand customers and reately.  He/she can obtain and expenses the she can obtain an expense the she can obta	d and use technical terms other trades.  discussions with superiors her own and other trades esolve conflicts approprievaluate assembly and opvell as product data sheets	ning and coordination me cision-makers" from all tr ities involved. trades propri- He/she can resolve conflic He/she can understand, i ply standards, laws and re		eetings with "de- ades and author- ets appropriately. Interpret, and ap- egulations within	across a tions.	can create complex process descriptions all trades, considering applicable regulacan organize cross-trade communication sign language.
9	Human resources management			profile of specialist staff an	taff and formulate correspond-  He/she can pre		views with emplo He/she can prepa He/she can recog	nduct and document personnel development inter- ployees.  Epare an appraisal for employees based on criteria.  Cognize the professional and personal development apployees and promote it through suitable measures.
