

MODULE 1: START OF THE LEARNING SITUATION

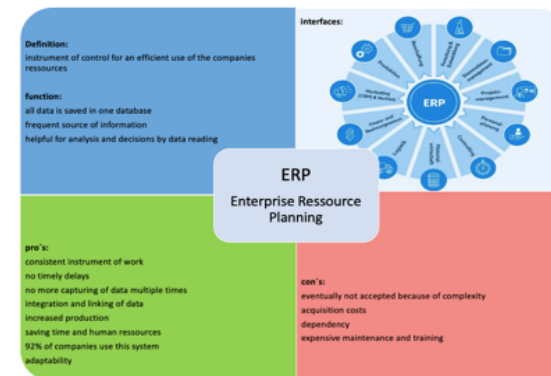

The learners are confronted with the learning situation.
Our goal: producing 20 individualized quadcopters

Questions we need to answer to reach our goal:

- What is a quadcopter?
- Which parts do we need for assembling the quadcopter?
- How does 3D printing work?
- What is an ERP System?
- How can SAP help us within the production process?

The learners realize how an ERP System can help us to get an overview over the production process of the quadcopter.
A timetable is created determining the questions that need to be answered in the upcoming modules.
